

H₂O^h Boy!

Is the water you're drinking fresh?

Probably not! Think of it: If you're buying Perrier or Poland Spring or any of those other bottled waters, what you're drinking has actually been in the ground for *thousands (if not millions!) of years*. That is hardly what we would call fresh water!

When you drink **TruFresh™** water, you're guaranteed to be drinking water that is no more than six months old. That's because we gather only the finest individual hydrogen and oxygen atoms and combine them (two parts hydrogen to one part oxygen, of course!) in our state-of-the-art hydrogen-oxygen bonding facility in Love Canal, NY.

Think about how truly fresh your coffee can taste when you make it with TruFresh water! Why would you ever go back to yucky old well or reservoir water? Lemonade, tea, it all tastes better when you use TruFresh!

And to top it all off, TruFresh isn't just for drinking, either! Use it with your favorite shampoo to make your hair extra shiny and manageable. Wash your dishes with it. Wash the car and make it really sparkle!

TruFreshWater

It doesn't come out of the ground.
